receiving a request from an internet protocol phone within the packet switched environment to establish a connection to a dialed number, the internet protocol phone having a wired connection to the packet switched environment;

determining a priority for the connection based on the dialed number;

generating a priority certificate based on the priority;

attaching the priority certificate to the communication packets of the connection; and

establishing the connection based on the priority;

monitoring use by an end-point of connections having an augmented priority; and  
modifying the priority of the connection based on the monitored end-point use of  
connections having an augmented priority.

18. (Canceled).

19. (Canceled).

20. (Currently Amended) A system for assigning call priority in a packet switched environment, comprising:

a means for receiving a request from an internet protocol phone within the packet switched environment to establish a connection to a dialed number, the internet protocol phone having a wired connection to the packet switched environment;

a means for determining a priority for the connection based on the dialed number;

a means for generating a priority certificate based on the priority;

a means for attaching the priority certificate to the communication packets of the connection; ~~and~~

a means for establishing the connection based on the priority;

a means for monitoring use by an end-point of connections having an augmented priority;  
and

a means for modifying the priority of the connection based on the monitored end-point use of connections having an augmented priority.

31. (Currently Amended) The system of claim 20, further comprising:

a means for determining if adequate resources are available for the connection; and

a means for ~~by~~ queuing the connection as first to receive resources as they become available, if resources are not available.

38. (Canceled).

39. (Currently Amended) A system for assigning call priority in a packet switched environment, comprising:

a computer-readable medium encoded with computer executable logic; and  
a computer for implementing the logic operable to receive a request from an internet protocol phone within the packet switched environment to establish a connection to a dialed number, the internet protocol phone having a wired connection to the packet switched environment, determine a priority for the connection based on the dialed number, generate a priority certificate based on the priority, attach the priority certificate to the communication packets of the connection, and establish the connection based on the priority, monitor use by an end-point of connections having an augmented priority, and modify the priority of the connection based on the monitored end-point use of connections having an augmented priority.

*Allowable Subject Matter*

2. Claims 1, 3-17, 20, 22-36, 39, and 41-55 are allowed.

The following is an examiner's statement of reasons for allowance:
